

## Announcing “A BA, PM, and EA Success story” by Ramsay Millar

EAUG – London, England

May 19, 2017

<https://skillsmatter.com/conferences/9421-enterprise-architect-user-group>

Leaders steering business transformation initiatives, in public and private enterprise, need strategic BA's, PM's, and EAs, working collaboratively to ensure business objectives are realized. We also need to reduce the risk of transformation failures by empowering people, fixing the process, and by integrating productivity tools. While transformation failures are growing, a small percentage of organizations are winning digital transformation initiatives. Find out what success looks like and why they are winning.

Creating collaborative transformations with diverse stakeholders are not the skills of traditional BAs, PM's and EA's. Learn insights, from the trenches, on why BA's PM's and EA's need to climb rise above silos and work together to dramatically reduce risk and improve business value. Share insights on how the top performing organizations practice a system's thinking approach to get it right the first time and avoid painful failures. Learn directly from recent case studies on how to succeed when planning and executing transformation projects across complex landscapes, involving diverse stakeholders, and many tools with duplicated information and no traceability.

Over twenty successful Sparx EA TOGAF repository deployment engagements, Millar developed the open INTEGRATED Framework for Sparx Systems Enterprise Architect, consisting of a harmonized blend of modeling standards from respected individuals and standards groups including, OMG BMM, OMG BPMN, OMG BIZBOK, OMG UML, CMMI, IEEE, IIBA BABOK, and TOGAF. Learn how one consultant firm has proven to their clients how to accelerate transformations, improve business flexibility, and reduce the painful risk of transformation failure. Enterprise Architects must ensure value by dramatically reducing transformation risks.
